

Academic Year/course: 2021/22

28961 - Energy uses of products and wastes

Syllabus Information

Academic Year: 2021/22

Subject: 28961 - Aprovechamiento energético de productos y residuos

Faculty / School: 201 - Escuela Politécnica Superior

Degree: 583 - Degree in Rural and Agri-Food Engineering

ECTS: 5.0

Year: 4

Semester: Second semester

Subject Type: Optional

Module:

1. General information

2. Learning goals

3. Assessment (1st and 2nd call)

4. Methodology, learning tasks, syllabus and resources

4.1. Methodological overview

The methodology followed in this course is oriented towards the achievement of the learning objectives. a wide range of teaching tasks is implemented such as:

- 1. The participative lecture will be the method used during the development of the theoretical classes. With this method, it is intended to encourage the active participation of students by formulating questions and/or exercises that help break the monotonous rhythm of the sessions.
- 2. In the practical sessions, problems related to the theoretical contents will be solved. During their development, student participation and cooperative work will be encouraged.
- 3. In the practical sessions with Hysys flowcharts of various industries related to energy use be studied and resolved.
- 4. In the technical visits, the students will acquire a practical and realistic view of the theoretical and practical contents studied in the course. Two visits are planned, corresponding to two different types of energy technologies.

4.2. Learning tasks

The program includes the following activities:

- 1. Theoretical classes. Classroom activity in which the contents of the proposed topics will be developed.
- 2. Practical sessions. Classroom activity in which problems related to the contents of the subject will be solved. They will be carried out in the computer room.
- 3. Technical visits. This activity includes two visits to industries related to optimization of energy.
- 4. Study. Personal study.
- 5. Tutorials.

4.3. Syllabus

The course includes the following learning tasks:

Theory programme

- 1. The problems related to energy
- 2. Generation of energy from fossil resources
- 3. Types of biomass, waste and crops.
- 4. Energy uses of biomass, biogas, bioethanol, biodiesel, biomass.
- 5. Technologies related to biomass and waste. Characterization, energy conversion technologies, resource optimization technologies

Practical programme

- Biomass combustion
- Characterization of waste
- Waste Incineration
- Estimation of gas production in a landfill.
- Computer simulation of process using Hysys: MTBE production

4.4. Course planning and calendar

Activity/Week	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
<i>Classroom activity</i>																
Theory	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2	2
Practical sessions			2	2	2	2			2	2		2	2	2		
Visits							5						5			
<i>Personal work</i>																
Individual work	4	4	4	4	4	3		3	3	3	4	1	1	6	6	7
TOTAL	6	6	8	8	8	7	7	7	7	3	8	5	8	6	6	7

4.5. Bibliography and recommended resources

- BB** Biomasa, estado actual y perspectiva inmediata / editores, José Ignacio Linares Hurtado... [et al.] ; autores, Jesús Fernández González... [et al.]. Madrid : Asociación Nacional de Ingenieros del ICAI : Universidad Pontificia Comillas, D.L. 2009
- BB** Camps Michelena, Manuel. Los biocombustibles / Manuel Camps Michelena, Francisco Marcos Martín. 2^a ed. rev. y amp. Madrid : Mundi-Prensa, 2008
- BB** ELIAS CASTELLS, X. Tratamiento y valorización energética de residuos. [s. l.]: Fundación Universitaria Iberoamericana, 2005. ISBN 8479786949.
- BB** Madrid Vicente, Antonio. La biomasa y sus aplicaciones energéticas / Antonio Madrid Vicente. 1^a ed. Madrid : AMV Ediciones, 2012
- BB** SEBASTIÁN NOGUÉS, F.; GARCÍA GALINDO, D.; REZEAU, A. Energía de la biomasa. Volumen I. 1^a ed. [s. l.]: Prensas Universitarias de Zaragoza, 2010. ISBN 9788492774913.
