#### **Methodological overview**

Students will be given in advance the materials to work with in each of session. These materials consist of specific book chapters and papers on the discussed topics. It will require students to read and prepare these materials before each session. During the sessions, the teacher will present the theoretical perspective, and students are expected to use critical thinking. In addition, different activities of theoretical and practical nature are proposed.

## Learning tasks

The course includes the following learning tasks:

- Lectures (20 hours): compulsory attendance. Students will work with specific bibliography related to the main paradigms and issues that affect growth and development.
- Autonomous work (47 hours).
- Resolution and presentation of problems and practical cases (8 hours): compulsory attendance. They allow a deeper knowledge of economic growth insights. These will be based on the use of international databases, with statistical and econometric techniques.

## Syllabus

The course will address the following topics:

Topic 1. Growth and economic development: the big questions

Topic 2. Four growth paradigms

Topic 3. Determinants of wealth differences among countries

Topic 4. Endogenous technical change

Topic 5. The role of human capital

Topic 6. The new facts in economic growth

Topic 7. Globalization and growth

Topic 8. Growth econometrics

Topic 9. The determinants of the institutional quality of the countries

Topic 10. The role of institutions in economic growth

## Course planning and calendar

The course contents, theoretical and practical parts, will be given in 14 weeks. Topics 2, 8, 9, and 10 will require two sessions per topic. The rest of the topics will be taught in one session.

## Bibliography and recommended resources

General references: They will be given through the University library.

In addition to these general resources, students will have the papers, databases and practices used in each session, available on the Web.
